A road transportable, multihull vessel offering superb performance

The RT range of vessels at Meercat Workboats are our Road transportable varieties, ranging from 14 up to 18metres as standard with an ability to extend to 24metres built in our new facilities in Hythe, Southampton.

The standard RT15 is a twin hulled vessel, the new model has a redesigned wheelhouse, larger moulded depth and a larger cargo capacity, whilst still maintaining its shallow draft, manoeuvrability and ability to be road transportable. The most popular of our RT vessels are adaptable to suit your requirements.

A multi-purpose workboard designed for port service, dredging support, dive support, buoy maintenance, fish farm support and general construction works.

This vessel provides an extremely stable work platform ideally suited for cargo carrying. This design has also proven itself to be effective as a pollution control vessel, ideally suited for deploying booms and skimmers. The RT15 can be deployed from a vehicle into the water, hulls connected and underway usually within an hour.
