- Dry and liquid cargo capacity
- Bespoke flexibility on each model
- Highly versatile across a wide range of applications
- UK MCA Workboat code of practice – Category 3 as standard

See reverse for full specifications

Our new innovative M range workboats with increased cargo carrying capability offering superb performance at an affordable price

The New Range M14 is the most compact of the Meercat range and a popular choice for those working in a confined environment. The M Range has been designed for those that require greater capacity to that of our road transportable versions. Standard vessel sizes range from 14 to 18 metres as standard but can be custom built up to 24 meters at our purpose built workshops in Hythe Southampton.

The M Range 14m is an ideal vessel for those wanting to carry large loads in environments such as inland waterways, coast lines and lakes and offers a cost effective solution.

A highly manoeuvrable vessel with a shallow draft, the M14 is capable of working in tighter spaces than most workboats of a similar size and with its impressive load carrying capability and forward mounted crane will be a popular choice amongst vessel owners. The new design allows for a greater bollard pull, improved visibility from the wheelhouse and is coded to MCA Workboat practice category 3 as standard.

As with all models within the Meercat Workboat range, we welcome the opportunity to design your Meercat to your exact requirements both in terms of specification and budget, contact the team at Meercat workboats to see how we can assist you, from finance solutions to delivering you the perfect solution.
